### **VENTURA**

#### ***Aquea Scientific receives recognition***

Aquea Scientific's Wash-On technology is the 2007 grand winner in the personal health category by Popular Science magazine in its annual Best of What's New awards, which recognize revolutionary technologies in 10 categories.

The winners were announced in the December issue of Popular Science.

Wash-On is a cleanser that protects the skin from ultraviolet rays. It uses patented technology to encapsulate active ingredients into micron-sized particles, which are then positively charged. As a result, the particles are attracted to negatively charged skin and hair and remain there longer.

Aquea Scientific is headquartered in Ventura, with a research and development facility in Sarasota, Fla.
